

# Delphi Telescoping Splined Slip Joint

### ► Description

The Delphi Telescoping Splined Slip Joint isolates steering wheel feedback due to dynamic front-end suspension movement. It offers higher torsional rates over traditional slip joints, with improved noise characteristics and durability performance. The slip joint can be used in vehicles that require the intermediate shaft to stroke while maintaining torsional performance.

### ► Benefits

- Plastic overmolded splines for lower noise levels and better hand-wheel "feel"
- Compact size fits most vehicle platforms
- Superior long-term wear performance when compared to similar joints
- Collapses under crash conditions
- Low load to stroke for ease of assembly
